WHAT WE DO

Our knowledge at your service.

Thanks to the well-trained staff and to the new warehouse with an increasingly wide range of products in stock **TEKNE PARTS** can boast a complete service to the more and more complex and structured companies claiming professional technical assistance, prompt answers and fast deliveries.

WORLDWIDE DELIVERIES

TEKNE PARTS, ASTRA-IVECO dealer for spare parts, is the ideal partner for all operators in the field of maintenance and repair of industrial vehicles: a valid support for the distribution of spare parts, both for technical and for diagnosis and repair assistance.

With a warehouse of more than 20.000 original parts for ASTRA-IVECO trucks, TEKNE PARTS is definitely a landmark in quarry sides, on-road and off-road vehicles.

TEKNE PARTS guarantees professionalism and courtesy in the daily relationship with customers: the UNI EN ISO 9001/2008 certification of its quality management system ensures the company's commitment to provide a punctual and reliable service in compliance with the customers needs.

Versatility and Performance

In the range of Desert Vehicles there is all the experience that **TEKNE** acquired during 30 years of work in close contact with the most demanding customers.

Desert is synonymous with **strength, comfort** and **high performance**: a range of vehicles that are distinguished, in all the custom made forms and for each type of personalization, for **constructive solidity** and **adaptability** to the most extreme and the harshest environments such as deserts and high altitude zones.

Chassis completely made of **tubular** with 5/5 mm thickness **steel** which undergoes special treatment with oils inside and subsequent external painting.

Widely customizable internal structure, depending on the size of the vehicle but also on the final use.

Widely customizable internal architecture, from a basic style to the most fine "luxury" version, depending on the final size and the intended use.

Powerful air conditioning systems for a comfortable traveling even in the most difficult areas.

PIPELINE

Strength and Agility

TEKNE enjoys today the necessary know-out to manufacture a **unique and high performance product** for technical and versatile characteristics. The vehicles can be manufactured on the 4 axes chassis of the main trucks builders.

The main modifications consist in a lengthening of the rear overhang, and in the transfer of the original cabin in an advanced lower position. A **specific structure "pipes holder"** is done, including subframe and service platform, pipes supports with adequate support cradles. The electrical part for the vehicle control and signaling equipment is consequently adapted. A further reinforcement on the 1st motion axle grants a better solidity to the vehicle. The transmission steering is completely rebuild as well as all the levers for the gear drive and the various installations.

Thus was born the PIPE CARRIER, a vehicle specifically created for companies that are leader in the pipelines industry. They can find in our product a fair compromise between efficiency and reduction of operational costs.

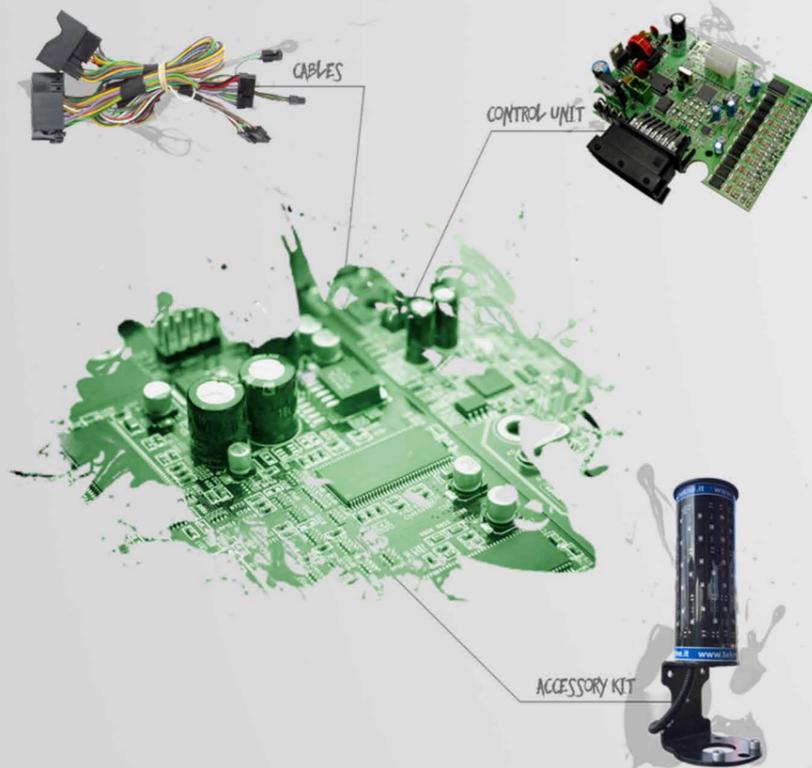

THE SPECIALISTS
OF THE QUARRY-SITE

OUR EXPERIENCE AT YOUR SERVICE

Thanks to its almost thirty years experience in the quarry site world, **TEKNE PARTS** becomes the ideal solution for every kind of request.

Careful but especially aware of the different needs of its customers, **TEKNE PARTS** is able to provide all kinds of parts or technical support also with the help of its workshop for the transformation and manufacture of special vehicles and becomes the ideal parts supplier for all types of vehicles.
